CONTENTS

Introduction 1

Dilute polystyrene solutions in extensional flows: birefringence and flow modification
P.N. Dunlap and L.G. Leal (Pasadena, CA, U.S.A.) 5

Structural changes during elongation of polymer solutions
J. Ferguson, N.E. Hudson (Glasgow, Great Britain) and B.C.H. Warren (Porton Down, Great Britain) 49

A comparison between combined steady and oscillatory stress on a controlled stress rheometer and a pulsatile pipe flow apparatus
J.M. Davies, T.E.R. Jones (Plymouth, Great Britain) and E.J. Carter (Hatfield, Great Britain) .. 73

Shear rheometry of fluids with a yield stress
A. Magnin and J.M. Piau (Saint Martin d'Hères, France) 91

The Stefan problem in polymer processing: theory and experimentation
H. Janeschitz-Kriegl, G. Eder, G. Krobath and S. Liedauer (Linz, Austria) 107

Experimental study of the sharkskin defect in linear low density polyethylene
G. Sornberger, J.C. Quantin (Valbonne, France), R. Fajolle (Verneuil en Halatte, France), B. Vergnes and J.F. Agassant (Valbonne, France) 123

Effect of molecular parameters on the viscoelastic properties of polymer melts
F. Pinaud (Saint Fons, France) 137

Basic principle in the viscoelasticity of polymeric liquids
M. Doi (Tokyo, Japan) 151

Unified molecular theories of linear and non-linear viscoelasticity of flexible linear polymers—explaining the 3.4 power law of the zero-shear viscosity and the slip–stick melt fracture phenomenon
Y.-H. Lin (Baytown, TX. U.S.A.) 163

Ideas about reptation, tube renewal and tube relaxation applied to the description of the non-linear viscoelastic behaviour in shear of some polydisperse polyethylene melts
H.C. Booij and J.H.M. Palmen (Geleen, The Netherlands) 189

Reptation and tube renewal: experimental and numerical simulation
G. Marin, J.P. Montfort and Ph. Monge (Pau, France) 215

Space filling and entanglements in polymeric systems
J. Rault (Orsay, France) 229

A critical comparison of constitutive equations for polymer melts
R.G. Larson (Murray Hill, NJ, U.S.A.) 249

Conformation tensor rheological models
M. Grmela and P.J. Carreau (Montreal, Quebec, Canada) 271

Anisotropic equilibrium conformations in solutions of polymers and polyelectrolytes
R. Drouot, G.A. Maugin (Paris, France) and A. Morro (Genova, Italy) 295

Rheological properties via nonequilibrium molecular dynamics: from simple towards polymeric liquids
S. Hess (Berlin, F.R.G.) 305

Unsteady shear flow of nonlinear viscoelastic fluids with finite elements
G. Böhme and R. Voss (Hamburg, F.R.G.) 321

Numerical simulation of the die swell problem of a Newtonian fluid by using the concept of stream function and a local analysis of the singularity at the corner
P. André and J.-R. Clermont (Saint Martin d'Hères, France) 335

Analysis of lubricated planar stagnation die flow
R.B. Secor, C.W. Macosko and L.E. Scriven (Minneapolis, MN, U.S.A.) 355

Computer simulation of flow and molecular orientation in liquid crystal polymers
W.B. Vanderheyden and G. Ryskin (Evanston, IL, U.S.A.) 383

Error estimates for a mixed finite element method for a non-Newtonian flow
J. Baranger, P. Georget and K. Najib (Villeurbanne, France) 415

Non-axisymmetric flow of a viscoelastic fluid between rotating disks
R.R. Huilgol (Bedford Park, S.A., Australia) and K.R. Rajagopal (Pittsburgh, PA, U.S.A.) 423

Decomposition of mechanical spectra into elementary Cole–Cole domains. Application to the viscoelastic behaviour of a styrene–butadiene–styrene block copolymer
A.C. Diogo (Lisbon, Portugal), G. Marin and Ph. Monge (Pau, France) 435

Authors Index 449
